## **Plastic Bag Kites**

**Component:** STEM

**Time:** 20 minutes

**Materials:**

- Plastic bag (grocery)
- String or yarn

**Procedure:**

1. Tie a length of the string or yarn to the handles of each bag. Try not to make it too long, as these kites are better for catching low drag wind than they are at actually flying up in the air.
2. Tie the two strings together and attach a foot long string to the two strings.
3. Go outside and fly the kites by holding the foot long string and running,
4. If students want to decorate the bag, use permanent markers to decorate it.
